

Handgrip

Steering wheel knob handgrip

The handgrip is composed of a knob that can be extracted by applying light pressure on a central button.

Steering wheel fork handgrip

The fork handgrip device is used for turning the steering wheel and is designed for anyone without a hand but with use of his or her wrist and forearm.

Steering wheel swivel handgrip

This type of handgrip swivels on its support and therefore facilitates the grip and use by people with myoelectric prostheses.

Steering wheel conical handgrip

Suitable for subjects suffering from total agenesis or complete loss of one hand or all of its fingers or comparable functional limitation.
