

Customized shaping of the platform with laser cutting

PLYWOOD FLOOR

The brand new FADIEL decks, made entirely in our production facilities, are made of durable Birch plywood with a thickness of 12 mm processed with fire-retardant glues.

The platform is elegantly finished in the easy-to-clean surface made of linoleum-like material, resistant to wear over time and with non-slip properties.

It is fixed using the original threaded holes already present in the vehicle, without having to make additional holes.

They are available tailored for a wide range of vehicles on the market.
