

Single-lever brake and accelerator control for tetraplegia

practical and simple

Brake and accelerator lever for tetraplegia

**Driving position**

The driving position is designed for having one hand on the steering wheel handgrip and the other on the single-lever to manage the brake and accelerator. The Fadiel Italiana single-lever is produced in different versions.

**Push-pull mechanical version**

This version provides the use of a 2-point knob or handgrip and a single-lever to actuate the accelerator and brake in a push-pull mode.

**Electronic version with rotation**

The single-lever combines the push-pull management with rotation, facilitating the use of the accelerator for people with little hand strength.

**Community codes**  
30.03, 30.04

Details of the electronic version with rotation
